---

Eric,

If you and/or Janine can test this and let me know if you find any issues with it:

<http://gis.eparesponsemanager.net/r6/WestFert31Test/>

This is the 3.1 RMCloud PDO Flex App. (a few important differences from the national template 3.1) that has been configured for this response.

If you find anything which functions ok in the 3.0 version, but not the 3.1 version, I can make it work in 3.1 no problem.

Brett

Can you start working on this stuff?

**Updates for the Viewer – 3.0 West Viewer -**

<http://gis.eparesponsemanager.net/r6/WestFertilizer/>

-

1. Implement the extent grabber widget on the [current ER Flexviewer](#) (It is version 3.0)
2. Move over any of the missing widgets from the 3.1 Viewer
  - a. EPA Facilities Search
  - b. Buffer Tool
  - c. Add Layer from Web.

**Updates for the Viewer – 3.1 West Viewer -**

[http://gis.eparesponsemanager.net/r6/WestFertilizer\\_3\\_1/](http://gis.eparesponsemanager.net/r6/WestFertilizer_3_1/)

1. Implement the fix you did to the Extent grabber widget on this viewer.

### **PDO Viewer – Current Version**

Bugs noticed:

1. Data Layers and Legend widget needs to be checked out – after you check a layer on then turn it off the ability to check another layer on and off goes away. Check out the [WestFertilizer 3.1 viewer](#) for the response specifically on the VIPER

### **Additional Things to look at.**

1. Update SOP for Flexviewer 3.0. we see something's that are different in the config file and the widgets need to be updated.

Also something's we noticed as we advance in versions icons and hover names of tools change. I think this is something for the users we should try to keep consistent.

Call me if you have questions

Thanks
